

Case study

About the client

Headquartered in Belgium, the client is renowned for its expertise in sheet metal design, manufacturing and distribution activities. The innovative product range consists of CNC Turret Presses, Press Brakes, Lasers, Mechanical Shears and Robot based Combo Machines. With over 60 years of expertise, the company is a pioneer in the creation of world class manufacturing units. The organization specializes in CAD/ CAM solutions for the modern engineering era.

Business case

The customer has been using Baan IV ERP since 1998. The legacy system had over 2500+ source code customizations. The nature of the business was such that each product is designed as per unique customer requirements. This leads to the need for an integrated system of tracing orders from raw material sourcing to final shipment of finished products.

Given the competitive business environment, the dependency on the quality and timely delivery of suppliers was creating a bottleneck in the overall supply chain performance. The many years of history of this organization had led to a bloated supplier base that needed reconciliation based on active performance.

**World's Largest Manufacturer
of Sheet Metal Forming
Machines Implemented Infor
ERP LN 6.1 FP3**

Highlights

Industry: Discrete Manufacturing

Location: Belgium

Employees: 500+

Engagement Since: 2010

Solution Snapshot:

- Windchill PLM Interface
- Warehouse Lift System Interface
- 'As Built' Product Details
- Bar Coding Solution
- Single Source of Data
- Drill Down MIS Reports

Environment:

- Operating System - Windows 2005 Server
- Database – MS SQL Server 2005

Modules:

- Service
- Warehouse
- Inventory
- Finance
- Purchase
- Planning

The organization was set up as a parent entity with multiple diverse business subsidiaries spread across geographies. This led to complex reporting requirements and the need for real time strategic financial information at different levels of hierarchy. Complicated inventory processes at the warehouse and shop floor were proving to be inefficient to handle the large volume of transactions. The IT infrastructure comprised of a large number of isolated legacy systems that led to data, time and effort duplication across departments.

Business solution

The existence of the Baan ecosystem led to the natural upgrade to the newer version of Infor LN 6.1 FP3. Godrej Infotech Limited (GITL), an Infor Channel Partner was selected as the preferred organization for architecting a state-of-the-art business process re-engineering solution. The features of the new system included:

• Data Migration

In house tool for seamless migration and clean up of legacy data using dynamic parameters

• 3rd Party System Integration:

Customized interfaces for integration with legacy systems

• EU Reporting

Automated European sales reporting as per Intrastat and Intracom regulations

• Standard Features

Elimination of costly code customizations by using vertical feature pack in the upgraded Infor LN product

• PLM Integration

Direct Bill of Materials (BOM) and routing charts preparation based on specification feeds received from the Windchill PLM System

• Warehouse Movements

Precise tracking of goods with the integrated Vanas Lift Storage System

Benefits

The new system implementation led to a multitude of benefits for the client such as:

- Reduced time for processing work orders, service orders, invoices and payments
- Shop floor process orientation eliminates person dependency
- Reduced probability of human errors with barcode scanning
- Multi-language, multi-currency functionality
- 40% reduction in software maintenance costs
- Easier finance audit compliance
- 20% faster after sales closures
